EXAMINATION RULES

1. It is forbidden to take the exam with a phone. Please hand in your phone to the attendant. This exam consists of 25 multiple-choice questions and the exam duration is 120 minutes.
2. Each question has only one correct answer. Mark your correct answer by completely crossing out the relevant box on your answer sheet. No marking in the question booklet will be evaluated.
3. All questions are of equal value and four wrong answers will cancel one correct answer. Questions left blank will not have a positive or negative effect on the evaluation.
4. The questions are NOT in order of difficulty. Therefore, it is recommended that you review all questions before you start answering.
5. It is forbidden to use aids such as compasses, rulers, calculators and scratch paper. Do all your work on the question booklet.
6. During the exam, you will not talk to the staff and you will not ask them any questions. It is unlikely that there will be a mistake in the questions. If this happens, the exam academic board will take appropriate action. In this case, you should mark the option that you think is the most correct.
7. Students are not allowed to ask each other for pencils, erasers, etc.
8. It is forbidden to leave the exam for the first 60 minutes. A candidate who goes out will not be allowed to take the exam again.
9. Do not forget to hand in your answer sheet and question booklet to the staff before leaving the exam hall.

1. Alp and Berk, without showing each other, find four different integers whose product is 360 and they add the four numbers they find. Then, they both write their sums on the board. What is the maximum difference between the two numbers written on the board?

- A) 134 B) 244 C) 122 D) 130 E) 80

2. The absolute value of a number a is denoted by $|a|$; $|a| = a$ if $a \geq 0$ and $|a| = -a$ if $a \leq 0$. Then, according to the equation

$$|n - |-3^2 - |-5^2 - |-2^3||| = 12,$$

what is the sum of the possible values of n ?

- A) 80 B) 84 C) 16 D) 24 E) 76

3. Below, some numbers are given on the number line with the letters A, B, C, D and E. According to this, which of the following fractions is greater than the others?

- A) $\frac{D}{A}$ B) $\frac{B}{E}$ C) $\frac{C}{B}$ D) $\frac{C}{E}$ E) $E \cdot C$

4. Some books will be chosen at random from a library containing 25 Turkish, 20 Mathematics, 10 Science and 9 English books. What is the minimum number of books to be selected so that there are at least 13 books of the same course?

- A) 43 B) 44 C) 53 D) 50 E) 39

5. The area of a triangle with given side lengths can be calculated by the following formula, known as Heron's formula.

Heron Formula: The area of a triangle with side lengths a, b, c is equal to

$$\frac{1}{4} \sqrt{(a+b+c)(-a+b+c)(a-b+c)(a+b-c)}.$$

Using this information, calculate the area of a triangle with side lengths 13, 14, 15.

- A) 84 B) 72 C) $9\sqrt{6}$ D) $10\sqrt{6}$ E) 80

6. There are 6 shelves in a bookcase and there are 23, 25, 32, 29, 26, 33 books on each shelf respectively. At least how many books should be moved so that each shelf has exactly the same number of books?

- A) 12 B) 13 C) 10 D) 8 E) 9

7. The teacher wrote 101 on the board. The students began to write the next number one by one, by adding 5, then by adding 10, then by adding 15, so in this way they created a sequence given below:

101, 106, 116, 131, 151, ...

If there are 22 students in the class, what number will the last student write on the board?

- A) 1361 B) 1366 C) 1356 D) 1351 E) 1371

8. If the area of the large square is 196 cm^2 and the area of the small square is 4 cm^2 , then find the length $|AB|$.

- A) 16 B) 15 C) 19 D) 20 E) 80

9. For any number A , $k(A)$, $b(A)$ and $t(A)$ are defined as follows.

■ $k(A)$: The smallest digit of the number A

■ $b(A)$: The largest digit of the number A

■ $t(A)$: Sum of the digits of the number A

For example, for the number $A = 45601$, $k(A) = 0$, $b(A) = 6$ and $t(A) = 4 + 5 + 6 + 0 + 1 = 16$.

How many five-digit even numbers with different digits are there such that $b(A) = 7$, $t(A) = 25$ and $k(A)$ is a prime number?

- A) 64 B) 120 C) 240 D) 24 E) 48

10. For any real number x , the representations $\lfloor x \rfloor$ and $\lceil x \rceil$ are called the floor integer of real number x and the ceiling integer of real number x , respectively, and are defined as follows.

If x is an integer,

$$\lfloor x \rfloor = \lceil x \rceil = x;$$

If x is not an integer,

$$\lfloor x \rfloor = \text{The largest integer less than } x$$

$$\lceil x \rceil = \text{The smallest integer greater than } x.$$

For example, $\lfloor 3,4 \rfloor = 3$, $\lceil 3,4 \rceil = 4$, $\lfloor 3 \rfloor = \lceil 3 \rceil = 3$.

If $10 < x < 24$ and $10 < y < 24$, what is the maximum value of the following expression?

$$\left\lfloor \frac{x}{4} \right\rfloor - \left\lceil \frac{y}{3} \right\rceil$$

- A) 1 B) 0 C) 2 D) 3 E) 4

11.

$$\frac{1}{2 - \frac{1}{2 - \frac{1}{2 - \frac{1}{2 - \dots - \frac{1}{2 - \frac{1}{2}}}}}}$$

The rational expression above has 1000 fraction lines. What is the value of this expression?

- A) $\frac{1001}{1000}$ B) $\frac{1000}{999}$ C) $\frac{1}{2^{1000}}$ D) $\frac{1000}{1001}$ E) $\frac{500}{999}$

12.

The figure above is created with regular hexagons. We want to color each hexagon with red, blue and black. How many different ways can this figure be colored, if no two adjacent hexagons are the same color?

- A) 8 B) 120 C) 9 D) 10 E) 6

13. In the figure below, two semicircles of different radii are drawn inside the great circle centered at O with a radius of 6 cm. If $|OB| = |BD| = |DC|$, how much larger is the shaded area indicated by S than the shaded area indicated by T?

- A) 8π B) 7π C) 9π D) 10π E) 6π

14. In the figure, OA and OB are perpendicular to each other. How many acute angles are there whose vertex is point O?

- A) 6 B) 18 C) 15 D) 20 E) 22

15. The following operations are allowed on the given numbers:

- Multiplying the number by 2.
- Add 2 to the number.

According to this, at least how many operations must be done to get the number 400 from the number 1?

- A) 8 B) 9 C) 10 D) 12 E) 16

16. Two types of tickets are sold for a concert: standing or seated. Three quarters of the participants in this concert are sitting in four fifths of the seats reserved for the concert. 24 of the seat tickets are not sold and these seats remain empty. According to this, how many people attended the concert standing?

- A) 24 B) 32 C) 36 D) 42 E) 30

17. In the figure, AE and CD are angle bisectors of the triangle ABC . If AE and CD intersect at point M and $m(\angle DME) = 124^\circ$, what is the measure of the angle $\angle ABC$?

- A) 60° B) 72° C) 68° D) 82° E) 76°

18. Öykü ties his dog with a 10-meter rope as shown in the figure between two walls 1 meter thick and 6 meters and 7 meters long, respectively. Find the total value of the areas that can be reached by the neck of the dog area where the dog's collar is attached.

- A) 29π B) $\frac{61}{2}\pi$ C) 27π D) $\frac{53}{2}\pi$ E) $\frac{69}{2}\pi$

19.

$$A(1) = \frac{1}{1},$$

$$A(2) = \frac{1}{2} + \frac{2}{2},$$

$$A(3) = \frac{1}{3} + \frac{2}{3} + \frac{3}{3},$$

$$A(4) = \frac{1}{4} + \frac{2}{4} + \frac{3}{4} + \frac{4}{4}$$

Continuing as follows and lastly

$$A(9) = \frac{1}{9} + \frac{2}{9} + \frac{3}{9} + \cdots + \frac{8}{9} + \frac{9}{9}$$

is written at the end. Then, what is the sum

$$A(1) + A(2) + A(3) + \cdots + A(9)?$$

A) 27 B) 25 C) 26 D) 20 E) 30

20. For $1 < x < y < z$, how many positive integer triples (x, y, z) are there such that

$$x + xy + xyz = 1001$$

A) 1 B) 3 C) 4 D) 5 E) 0

21. How many three-digit numbers less than 500 are exactly divisible by the number in the hundreds digit?

A) 200 B) 209 C) 198 D) 211 E) 199

22. If $-5 \leq x \leq 6$ and $-6 \leq y \leq 10$, what is the sum of all integer values that the product of $x \cdot y$ can take?

A) 480 B) 1200 C) 980 D) 555 E) 500

- 23.** A villager selling eggs, buys 10 liters of milk from another villager by exchanging 1 liter of milk for 8 eggs and starts selling milk along with eggs. When he sold all the products he had as a result of this exchange, he made 200TL more profit. If the villager sold 1 egg for 4 TL, how much did he sell 10 liters of milk in total?
A) 500 B) 540 C) 520 D) 560 E) 550

- 24.** Let a , b and c be positive integers. If
- $$1 \div (a + 1 \div (b + 1 \div c)) = \frac{21}{68},$$
- then find the sum

$$a + b + c.$$

- A) 8 B) 10 C) 16 D) 15 E) 12

- 25.** Berke wants to buy dollars for all the lira he has. Bank A , which offers 1 dollar for 20 liras, charges a service fee of 50 liras regardless of the amount of money exchanged. Bank B , which offers 1 dollar for 21 liras, charges a service fee of 2 dollars. Berke realizes that he can buy the same amount of dollars from both Bank A and Bank B with the money he has. How many liras does Berke have?
A) 180 B) 190 C) 200 D) 210 E) 220
